**RE: Contamination Assessment Plan for Groundwater Monitoring and Free Product
Evaluation, Revision 2, Former Bulk Tank Facilities, Naval Station Mayport, EPA ID# FL9
170 024 260, Mayport, Florida (Tetra Tech NUS, Inc., September 2010)**

Dear Ms. Washington:

I have reviewed the subject document dated September 2010 which was received on September 22, 2010. This Contamination Assessment Plan (CAP) was prepared under Contract Task Order 0031. The CAP provides the rationale and methodology for performing field activities to characterize groundwater conditions at the referenced sites. The objective of the proposed field investigations is to determine the extent of groundwater impacts by previous operations at the sites. The data collected during the Former Bulk Tank Facilities (FBTF) investigations will be used to prepare corrective action documents, if required, in accordance with Chapter 62-780, Florida Administrative Code (F.A.C.). The investigation will characterize site conditions from which to base future courses of action. Field activities planned during this CAP include monitoring well installation and development, groundwater sampling, surveying, and IDW management. FDEP understands that the first sampling event has been conducted and laboratory results are pending, and that additional events will be performed after Navy procurement is completed. I am in concurrence with the CAP as stated in this report. Future decisions can be made following data review as groundwater sampling and document preparation/completion continue.

Thank you for the opportunity to review this document. If you require additional clarification, or other assistance, please feel free to contact me at 850/245-8999.

Sincerely,

John Winters, P.G.
Remedial Project Manager
